

ABSTRACT OF THE INVENTION

The present invention is to provide a parallel arrangement of adapter cards with respect to a motherboard in installing the adapter cards in a computer case and to configure the adapter cards exposed on the computer case to be flat with an expansion plate provided on one side of the computer case by eliminating
5 any recess on the computer case. As such, a user can easily, quickly plug a cable in a connector of the adapter card or unplug the same because sufficient space is provided. As a result, other cables coupled to adjacent connectors will always maintain good connection during the plugging or unplugging process.
